

Traffic Management Training 16/10/2024

As part of the Sustainable Urban Mobility Plan (SUMP İzmir), a 3-day *Traffic Management* training was organized by expert Paolo Squillante, with active participation and contributions from experts across various departments of İzmir Metropolitan Municipality.

On the first day, the training covered general concepts of traffic management and introduced various traffic management tools. The second day focused on next-generation traffic management, including Cooperative Intelligent Transport Systems (C-ITS), tunnel traffic management, and the integration of road information systems. Discussions also highlighted how traffic management could be embedded into municipal operations and what innovative procedures are being developed.

The final day concentrated on İzmir's current traffic management practices. Participants engaged in both theoretical discussions and practical sessions aimed at exploring how traffic management in the city can be optimized.

The training was successfully completed with the active involvement and valuable input of municipal experts.
